

Integration of Artificial Intelligence in Education and Software Development

Luna Schätzle

Florian Prandstetter

Diploma Thesis Defense – April 2025

HTL Anichstraße, Department of Business Informatics

Thesis Supervisor:

Mag. Dr. Dipl.-Ing. Albert Greinöcker

MMag.^a Eva-Maria Egger, MA

Introduction

- **Presenter:** Luna Schätzle – AI evaluation & website
- **Objective:** Develop an open-source AI platform for education
- **Focus:** Evaluate various AI models for diverse applications
- **Platform:** Provide students with accessible AI tools
- **Motivation:** Mitigate the high resource demands of current open-source AI models

Open Source: Impact & Approach

- **Definition:** Public, collaborative development
- **Benefits:** Cost-efficient, flexible, and secure via community review
- **Impact:** Fuels innovation and startup growth
- **Approach:** Leverage Python, Flask, and Vue.js
- **Licensing:** Released under GNU GPL-3.0

Testing and Evaluation

- **Models Evaluated:** Llama3.2, Deepseek-r1, Gemma2, Qwen, etc.
- **Methods:** Automated testing with varied prompts via Python scripts.
- **Criteria:**
 - Response time
 - Resource utilization
 - Accuracy
 - Readability and text quality

Evaluation Results

- **Data Visualization:** results plotted to highlight key differences
- **Performance Analysis:**
 - slight variations in latency, accuracy, and resource consumption
 - Compact models often yield superior efficiency
- **Key Insight:** Model size is unreliable for overall performance; holistic evaluation is essential.
- **Integration:**
 - Flexible, user-driven model selection
 - User can select the model based on their needs

Website: Education Platform

- Serves as a centralized portal for accessing various AI tools.
- Technologies: Vue.js (Frontend), Flask (Backend API), and Firebase (Authentication).

The screenshot shows a web application interface titled "Luminara Schüler-KI-Plattform". At the top, there is a navigation bar with links for "Accueil", "Chat Beta", "OCR", and "OpenAI Image". Below the title, a button says "JETZT PROBOSTRIESEN". A section titled "Beschreibung" contains text about the platform's purpose: "Die Schüler-KI-Plattform ist eine webbasierte Anwendung, die es Schülern ermöglicht, sich anhand von unterschiedlichen künstlichen Intelligenzen (KI) zu interagieren. Die Plattform kombiniert die Nutzung der ChatGPT API mit weiteren lokalen KI-Modellen wie Olmeca, die auf dem Schülereigenen Gedanken basieren. Ziel ist es, den Schülern vielseitige Unterstützung beim Lernen und bei der Bearbeitung von Aufgaben zu bieten." Below this, a section titled "Funktionen" lists two features: "Programmierwerk" (represented by a code icon) and "OCR (Bild zu Mischtext)" (represented by a document icon). Both sections have descriptive text below them.

User System

- Secure registration and login.
- User profile management.
- Firebase-based authentication.

Willkommen, Test User

Funktionen

- Olimex KI
- Chat
- Bilderkennung

Chatbot Interface

- Multiple AI models available via a tabbed interface:
 - Evaluated models (e.g. Llama3.2, ...)
 - Vision capabilities: LLaVA, LLaMA 3.2 Vision.
 - Programming Assistant
 - ChatGPT (OpenAI API)

The screenshot shows the Luminara AI v.1.0 interface. At the top, there is a navigation bar with links: Home, Account, Chat Bots, OCR, and OpenAI Image. Below this is a main content area with a sidebar on the right.

Luminara AI v.1.0

- Chat mit Ollama
- Luminara Vision Models
- Programming Bots
- Chat GPT

Powered by Ollama and Flask-API

Kommunikation mit Ollama (LLaMA-Modell)

Wähle ein KI-Modell: LLaMA 3.2 - 1B (schnell) ▾

Bitte wähle einen Chat oder starte einen neuen.

Gespeicherte Chats

- Schule
- Mathe
- E-Mails

+ Neuer Chat

Image Generation

- Generate images from text prompts.
- Powered by DALL · E (OpenAI).

OpenAI Image

Bildgenerator
Verbleibende Token: 84

Gib einen Prompt ein (z. B. 'A cute baby sea otter')

Bild generieren (5 Token)

Bild erfolgreich generiert!

OCR ... Optical Character Recognition

- OCR capabilities using Tesseract.
- Post-processing with a large language model.
- Outputs formatted using Markdown.

The screenshot shows a web-based OCR application. At the top, there's a button labeled "Datei auswählen" and a placeholder "Keine ausgewählt". To the right is a blue button labeled "OCR ausführen". Below this is a section titled "OCR-Funktionalität" with a sub-section "Lade ein Bild hoch, um den Text zu extrahieren und zu verbessern." A file input field is present. On the right, there's a green button labeled "Datei auswählen".

On the left, under "Extrahierter Text:", there is a block of text in German about solving a differential equation. It includes mathematical symbols like y' , $y = 4$, and \int . Below this text is a green "Kopieren" button.

On the right, under "Verbesserter Text:", the same text is shown in a cleaner, more structured format. It includes the heading "Hausübung: Lösung der Differentialgleichung $y' = y + 4$ ". Below this, there's a section titled "Schritte zur Lösung der Differentialgleichung" with two numbered steps. At the bottom, there's a note about the original equation being $By' = y + 45$.

Applications:

- Customer service & support
- Supply chain management
- Predictive analytics
- Data analysis
- Process automation

Ethical & Social Concerns:

- Bias in training data
- workflow changes
- Privacy and data protection

AI in Economics and Ethics: Regulatory Challenges

- Data security standards
(GDPR [EUR-Lex: 2016/679])
- EU AI Act [EUR-Lex:
2024/1689]
- Inconsistent global regulations

Thank You for Your Attention!

A decorative graphic consisting of nine overlapping squares arranged in a diamond pattern. The colors of the squares are light gray, yellow, light purple, orange, light green, and pink. They overlap to create a sense of depth and texture.

Diploma Thesis Defense – April 2025

HTL Anichstraße, Department of Business Informatics

Thesis Supervisor:

Mag. Dr. Dipl.-Ing. Albert Greinöcker

MMag.^a Eva-Maria Egger, MA

Introduction

- **Presenter:** Florian Prandstetter – Server, VS Code Extension & Operating Systems
- **Objective:** Develop an open-source Extension for Visual Studio Code and a stable server environment
- **Focus:** Brauchen ma des?
- **Platform:** Brauchen ma des?
- **Motivation:** Brauchen ma des?

Server

- **Server Hardware:**
 - CPU: Intel Core i5-8600k
 - GPU: NVIDIA GeForce RTX 2060
 - RAM: 16GB DDR4
 - Motherboard: H370 Chipset
 - Power Supply: 500W BeQuiet
 - Storage: 512GB NVMe SSDd
- **Networking:**
 - Axios: Used for server requests
 - Tailscale: VPN tunnel used for secure remote access
- **Backup and Recovery:** Regular system backups have been made to avoid data loss.

Operating System

- **Used Operating System:**

The Server is running with
the Ubuntu Server
Operating System.

- Good basis for AI models
- CUDA support

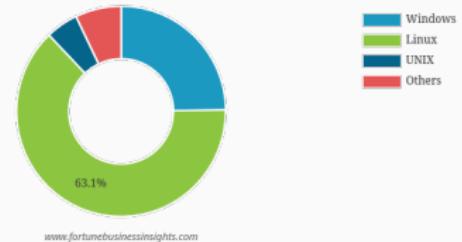

Operating System Market Share

For Personal Use

For Servers

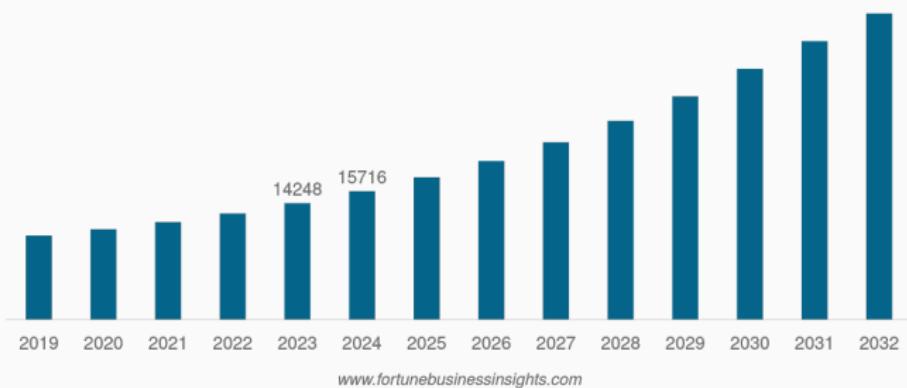

Global Server Operating System Market Share, By Operating System, 2024

Server Operating System Market Volume

- Global Market Share: America 59,56%
- CAGR: 12,4%
- Expected to double by 2032

Americas Server Operating System Market Volume, 2019-2032 (K Units)

www.fortunebusinessinsights.com

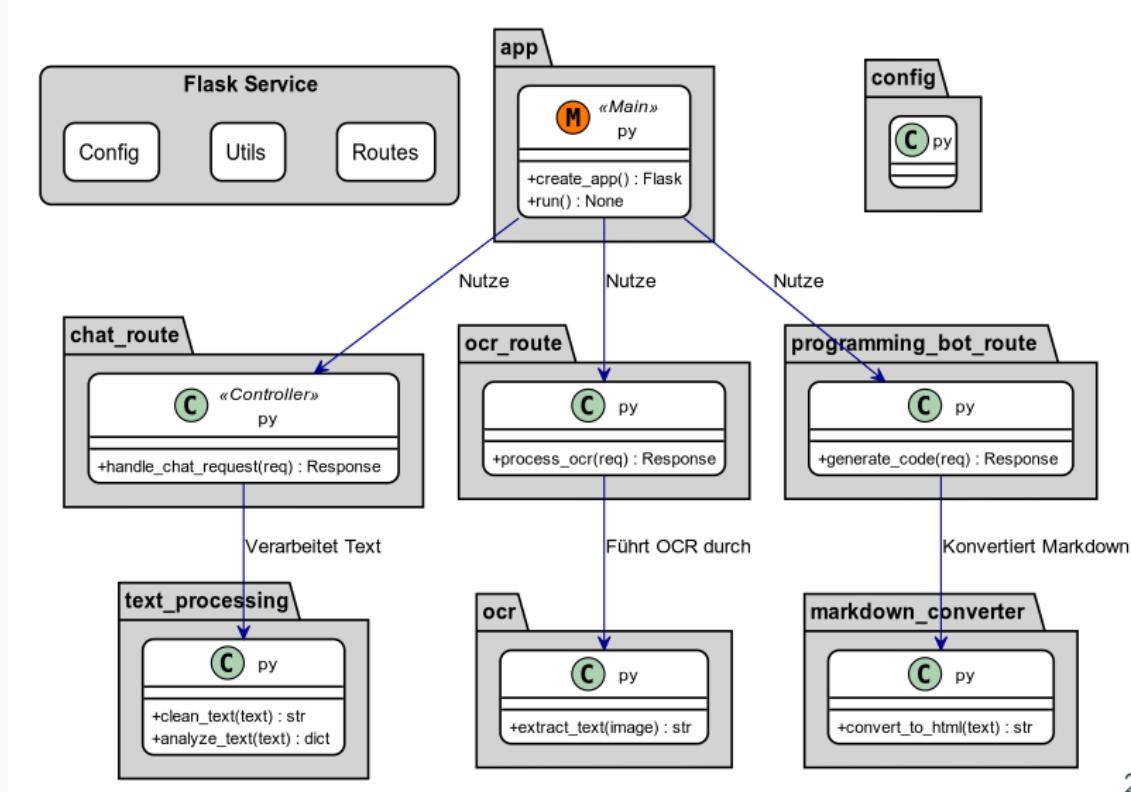

- **Restful Endpoints and Functionalities:**
 - Chatbot
 - Programming bot
 - OCR
- **Deployment with Docker:**
 - Dockerfile
 - Docker-Compose

Flask Service

- Architecture and Service Structure

Visual Studio Code Extension

- **Integrated AI Chatbot**
- **Technologies:**
 - VS Code API
 - Type Script
- **Server Requests:** Are handled with Axios to create a stable connection.

Visual Studio Code Extension

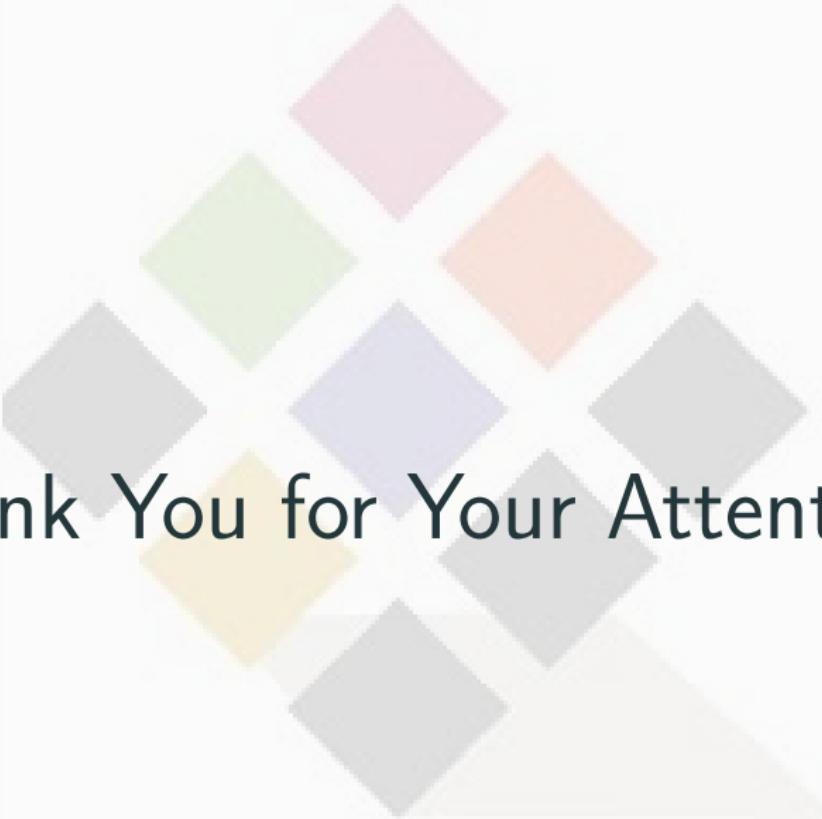

- Separate Chat-Window
- Output into file
- Adjustable Color Themes

Risks of AI

- Transparency
- Accountability
- Job displacement
